

## **MKS Configuration Management Administrator Training**

A successful configuration management system is not built on software alone. At MKS, our professional services team is committed to understanding our clients' ever changing development environments and providing training, upgrade, implementation and installation services to meet their unique technical requirements.

We guide you through process analysis, software installation, implementation and product and process training for MKS Configuration Management, MKS Workflows and Documents and Implementer for iSeries/AS400 product lines. This ensures maximum control over your software development activities and provides a compelling return on your MKS technology investment.

Below is an outline of MKS Configuration Management Administrator training:

**Duration:** 1 day

**Pre-requisite(s):** MKS Configuration Management Basic User training

**Maximum Enrollment:** 5

### **Intended audience:**

This course is for sites that will use MKS Configuration Management. It covers Configuration Management administration concepts, operations and processes. It is meant for users who will need to perform or know how to perform these tasks:

- Configuring the Integrity Server
- Setting up security and permissions
- Customizing the Configuration Management installation

### **Course Content:**

- Licensing – How Integrity Server licensing works.
- Properties Files – Configuring server properties files to suit your needs.
- Unified Administration – Managing the Integrity Server and Configuration Management through the MKS Administration Client.
- Service Packs – The Integrity Server service pack process.
- Security – Security realms and schemes that can be implemented.
- Access Control Lists (ACLs) – Controlling user and group access to Configuration Management features.
- Policies – Setting Configuration Management user policies (for locking, change packages, etc).
- Change Package Review Process - Setting up the Configuration Management change package approval process.
- Locking Policy – Choosing a Configuration Management file locking policy type.
- Event Triggers - Creating customized Configuration Management actions.
- Keywords – Creating and enabling custom placeholders.
- Federated Server – The concepts behind the MKS Federated Server technology.
